

Fantastic review, **RECOMMENDATION and 5 stars** for our all-in-one hybrid system HTR-1000CD v.2 by "AUDIO Video" (12-2021).

SOUND

When checking the price, I shouted of surprise. ... was well below my expectations.

What draws attention the most is the quality of the timbre: completely different than from top products at the similar price... clear and open... The treble, for such an affordable all-in-one device, is presented with a decent resolution and precision... The bass was also appreciated... Stereophony is surprisingly good... The depth and tangibility are so correct that you can hear a clear difference in the reproduction of the scene, for example with the loudspeaker grilles on and off.

IN OUR OPINION

... in terms of internal structure, it exceeds expectations. Electron tubes and a large linear power supply are not something that famous players were implementing in their mini systems...

A nice sound makes it a device that we can confidently recommend to all music lovers who still use CDs and do not shy away from traditional radio, especially as DAB has its advantages. Let's add a pair of good speakers to TAGA and you can enjoy more than a decent sound.
