

“AUDIO” magazine published a very good review of our floorstanding speakers TAV-616F SE.

Listening

“The character of sound is defined by its exceptionally strong midrange with its accent shifted towards the high frequencies; it is not even an accent, it is the epicenter, the center of vitality and communicativeness. There are no other speakers that sound so directly, distinctly and aggressively not only in this group but in the further range as well.

It's a clear, though a little intriguing message; finally it is unique and can be treated as a rare opportunity (regardless of the price) to hear music in this way...

The TAV-616F SE highs are subordinate to the mids which usually means sound which is close, but warm or even dark.

*The TAGA's sound shines like brushed metal, not like chrome, it's not smooth, it abounds with roughness,, sometimes it almost brushes, but only when it fits with the music - and it fits quite often - **then the emotions are exceptional.**”*
