TAGA Harmony Platinum F-100 SE v.2 floorstanding speakers: a rave review and recommendation by AudioMuzoFans – an audio portal and a specialized audio group on Facebook (06-2017).

### Listening

*“We would like to draw your attention to the placement of the speakers. Each change of their placement and position relative to each other brings noticeable changes...*

*What stands out from the beginning is the way how a musical scene is built. **The modeling of the musical image could be rather considered closer to the one that good monitors are building rather than this size of the loudspeakers. This is one of the greatest strengths of these speakers.** It seems to us that it is the result of good matching of high and mid drivers. Of course, it is not that there is some lack of the lowest registers, but they are not so crucial for building the scene. Large symphony orchestras are not a problem for them. Thanks to high accuracy in the high-mid tone range in the previously mentioned large compositions **we get a palpable, selective and spatial sound...***

*During the listening sessions, we noticed that it is rather not a warm sound but **it is natural and balanced throughout the range, so that we receive an accurate music message...***

*We do not have to guess whether the sound came out or not. It is simply audible. The micro-dynamics is really a big advantage of the speakers. Voices, especially female, are not artificially colored...”*

### Summary

*“Bearing in mind the above, one cannot pass indifferently by this product which does not only sound in a very natural way but additionally its quality of workmanship is attractive and it is priced very reasonably. With a clear conscience we can recommend the Taga Harmony F-100 SE v.2 to those who value quality for reasonable money and seek natural sound performance...”*

*For the whole “**price / quality / sound**”, we award the Taga Harmony Platinum F-100 SE v.2 **AUDIOMUZOFANS RECOMMENDATION**”*
