

AZURE F-100 v.2

"Taga Harmony has been systematically raising the level of its products what can be clearly seen and heard on the example of these speakers. Large sized enclosures incorporating a three-way system based on two woofers is processing the bass audio band in such a way that we have no questions - there is power, it is going down to the lowest octaves and it is almost perfectly, for this price segment, controlled. Definitely worth checking out!"

Lively, dynamic and rich sound. Balanced and subtle in the high frequency range. Low-extended, fast and powerful bass. Large surround sound, with a touch of finesse which is typical for polypropylene cones."
