

TAGA Harmony HTA-1200 hybrid amplifier awarded a **"SHOCK"** reward by "Classica" a prestigious French magazine.

REVELATION

"If Poland's position is not yet established among the great countries famous for high fidelity, it has long been one of the great musical nations.

Therefore we are not surprised that we are offered the restitution of all the beauty. The beauty of timbre, colors, structure. Undoubtedly the tubes have their share in the creamy sound texture, which is not sloppy, it is consistent, but not too meaty.

Similarly, the transistors supported by a toroidal transformer e provide energy with confidence (influencing orchestral tutti, firmness of piano attacks, sharpness of the drums) and clarity. The musical message in a three dimensional space is characterized by great stability and

remains constantly readable regardless of the size and volume of the sound. The voices ring with thrilling realism and get out of the narrow speakers frame. Revelation"
