

HTA-700B SE v.2

"I have to admit that TAGA Harmony turns out to be a melodious amplifier which has a great ability to attract attention because of its colorful timbre. Especially in mids and high registers the amplifier plays with charm and grace, which can be expected from tube designs. The bass is pulsating decisively and with a controlled rhythm.

The TAGA Harmony HTA-700B SE v.2 is a small, almost miniature amplifier, but with a great heart to play.

... TAGA Harmony sounds cool on every of the inputs, and whatever kind of music we are listening to, it is always enriched with tube mood, for which so many people just love constructions based on incandescent vacuum tubes."
