A great review, **BEST BUY award and 5 stars** for TAGA Harmony PF-2000 power filter by “Hi-Fi Choice” (12-2018).

*“In the less expensive audio system **the sound was significantly improved** compared to an option when being powered directly from the wall outlet. Especially **the soundstage was remarkably upgraded** and the virtual sound sources were sharper, the first line gained more mass and particularly the vocals were more intensively saturated. Another noticeable change was an **improvement in the low frequency range**, the sound was more distinctly shaped and better controlled (though I have to emphasize that the bass quality improved just when I decided to power the amplifier with another shielded power cord, as well as to deliver power electricity to the PF-2000 using a solid, shielded power cable).*

*Most importantly is that this what annoyed me the most in this budget audio system was improved – high frequencies were more precise, but not sacrificing the attack, which was highly reduced and what emerged in **smoother and less nervous highs**. If we decide to buy this power filter the sound of high frequency range is the first thing we should pay attention to. If your hearing is good then you will definitely hear that the first improvement is audible in the high frequencies.*

*In the more expensive and more sophisticated system which was based on Hegel H-80 and Ayon CD-10 Signature the soundstage space was slightly improved and the stereo image gained on dimension which resulted in a bit wider and deeper soundstage presentation. It was especially evident with instrumental music by Lars Danielsson played out from a hybrid CD/SACD disc, where **lots of fine details and sounds was presented in the space in a more clear way...**”*

SUMMARY

*“The PF-2000 power filter will not only protect powered equipment but has a positive influence on their sound. Besides it is a perfect alternative for tangle of not-shielded cables plugged into low quality extenders which degrade the sound of audio systems. **Given its features and high built quality its price is simply a bargain.**”*
