

12-July-2018

A great review, **BEST BUY and 5 stars** for TAGA Harmony Platinum F-120 v.3 speakers by "Hi-Fi Choice" (07-2018).

**Naturally and transparently**

*"...The bass presents itself condensed and is characterized by desired mass and depth which is especially noticeable in the instrumental music and strong rock. On the other hand, the speakers have been tuned in such a way that **their spatiality of sound reaches a level which is unprecedented among speakers in a medium and even higher price range.***

*The F-120 v.3 speakers generate a life size of the soundstage, complemented by detailed and precise mapping of any apparent source ... they have a very open and airy midrange. This will be especially appreciated by fans of classical and jazz music, so the people for whom the natural sound message of any "live" instruments is the most important... ... one of the strongest features of the F-120 v.3 loudspeakers is the coherence of sound in the full band, at the same time the sound of specific instruments is reproduced without colorations and unwanted phase shifts that blur the correct spatial image...."*

**Verdict**

*"Pros Coherent and natural sound without excessive colorizations. The medium tones - open and with an over-average clarity plus the detailed and non-intrusive high frequencies. The extended bass with a strong impact but not losing the necessary information for the proper sound reproduction of live instruments."*
