

"wstereo.pl" an on-line magazine published a very rave review of TAGA Harmony TTA-1000 vacuum tube amplifier (10-2017).

Sound

1st opinion

*"Taga Harmony TTA-1000 plays in a quite distinctive way trying to combine two sound worlds: **musical, warm, gentle with clear, fast and plenty of air...***

*TAGA presents **the mids in the most tangible and direct way... Their timbre is warm and saturated, the vocalists sound very palpable and present...** Kurt Elling or low murmuring of Tom Waits were really very convincing..."*

2nd opinion

*"**The soundstage and its width are excellent, the sounds are heard far beyond the outline of the speakers.** The depth was not so spectacular for me, but there were no hassles in drawing the plans and placement of musicians on the three-dimensional scene."*

Summary

*"Taga Harmony has decided to take a brave step into a new territory for them. **And they should not regret it. Their first pure tube amplifier defends itself with its sound and has a lot of potential. It sounds in a very consistent and safe way which does not mean that it is boring. It offers very good space and great, tangible midranges - the enthusiasts of warm vocals should be fully satisfied. It sound in a rhythmic way and there is no lack of dynamics. It is very musical, smooth and compact...***
The amplifier has a lot of potential, because by replacing the tubes one can clearly improve its sound qualities."
